EDUCATION

Northeastern University

Computer Science (Concentration in AI), B.S.

Aug 2025 – Apr 2028

Boston, MA

De Anza College

Dual Enrollment

Aug 2021 – Jul 2025

San Jose, CA

- Earned **60+ college credits** over 4 years of dual enrollment, including spending senior year of high school taking college courses full-time as a part of Middle College (2025).

Combined Coursework: Data Structures & Algorithms, Object-Oriented Programming (Java/C++), Program Design & Implementation, Discrete Mathematics, Probability & Statistics, Mathematical Foundations of AI, Data Visualization & Methods, x86 Assembly & Architecture, Ethical Hacking, SQL Programming

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, SQL

Web & Backend: React, Next.js, Node.js, Flask, REST APIs, PostgreSQL, Firebase

Systems & Infra: Docker, GCP, Git, GitHub Actions, CI/CD, Playwright, Vitest

AI / LLM: OpenAI, Anthropic, Gemini, Llama, RAG, LLM Evals, Embeddings, MCP, Vector Search

EXPERIENCE

AI Engineer Intern

Rysun Labs

May 2026 – Aug 2026

Milpitas, CA

- Modeled a **40–90% lift in LLM citation rate** from catalog enrichment and **70% recovery of zero-result searches** from semantic retrieval, projecting up to **5x growth in AI-referred traffic**.
- Delivered a multi-tenant 5-stage crawl-to-delivery pipeline that emits structured catalog files built for frontier LLMs to ingest directly, raising model confidence in client product data (tested on catalogs up to **46K products**).
- Packaged the semantic search layer (embedding retrieval + LLM re-ranking) as a drop-in component for client storefronts, benchmarked against classical search with a **192-query eval harness**.

Fullstack Engineer

Storiloom

Feb 2026 – Present

Hybrid

- Launched a zero-install platform that gathers relatives' stories into one private timeline and surfaces the connections between them — onboarding **450+ families** and preserving **6,000+ stories** in the first three months.
- Developed end-to-end: a secure WhatsApp webhook driving a conversational state machine, passwordless magic-link auth for webview pages, and the full memory-capture flow — text/voice/photo/video intake, transcription and polish, and delivery to family members.

Software Engineer Intern

Rysun Labs

Jun 2024 – Aug 2024

Milpitas, CA

- Built an internal full-stack GenAI comparison platform (Flask + React) that dispatches one prompt to **OpenAI GPT, Google Gemini, and Meta Llama** in parallel and renders the three outputs side-by-side for evaluation.

Lead Developer

Lynbrook High School Job Shadow Program

Feb 2023 – Apr 2025

San Jose, CA

- Enabled **560+ students** to job-shadow at **115 companies** by building the platform that matched students to partner organizations for the program's annual job-shadow day.
- **Promoted to Lead Developer**, leading **5 student developers** to build all four role-based portals — students, recruiters, host employees, and program staff — each with its own permissions and workflows.

PROJECTS

ROT — Custom Programming Language | [Live Playground](#)

Python, Next.js, Pyodide, framer-motion

Jan 2024 – Present

- Shipped a custom programming language built to teach how interpreters work under the hood, implemented with two execution engines: a tree-walking AST interpreter and a **38-opcode** stack-based bytecode VM.
- Supports production-language features — error handling, f-strings, **41 built-ins**, rustc-style error messages — runnable in an animated playground with live stack visualization (**15K+ LOC, 819 unit tests**).

Summary Bot

Python, Discord.py, OpenAI, Google TTS, GCP, Firebase, Git

Mar 2023 – Apr 2026

- Engineered a Discord bot that summarizes high-volume conversations using AI; deployed across **1,500+ Discord servers** over 3 years, serving **875,000+ users** and analyzing **~20M words** of conversation.
